

Approach: Staff Augmentation

Year: 2014 to present

Client: Russ Reid

Industry/Sector: Media & Fundraising for
Non Profit Membership
Associations

Client Need/Objective: Functional testing of responsive design; functional testing of Web forms; testing “enter once, use multiple” cookie implementation; acceptance testing of social media sharing functionality; validating links; tracking and categorizing defects across entire Wordpress-based site; and testing of browser and cross-platform compatibility of the site.

Sysazze Solution: Sysazze QA analysts perform exhaustive validation testing of the client’s Wordpress and Javascript Web site, identifying, categorizing and prioritizing two dozen functional defects and multiple design implementation defects. The majority of the defects identified are related to browser compatibility and responsive implementation issues. The defect findings are fully documented and referred to developers for remediation and user acceptance testing.
